PANEL “OPPORTUNITIES AND CHALLENGES IN THE AGE OF DIGITALIZATION IN COMMUNICATION”

Digitalization is transforming contemporary societies by recreating communication, governance, public security, and democratic participation. The rapid advancement of digital technologies, artificial intelligence, algorithmic decision-making, and online platforms has created unprecedented opportunities for innovation, civic engagement, and access to information. At the same time, these developments have introduced complex challenges related to a range of topics concerning misinformation, hate speech, algorithmic governance, media fragmentation, and the resilience of democratic institutions.

This panel brings together academics and practitioners to examine the multiple implications of digital transformation for the society, politics, media, and public security. Through an interdisciplinary dialogue, participants will present their most recent research that explore both the opportunities offered by digital technologies and the emerging risks associated with increasingly interconnected digital ecosystems.
